It's hosted on yakshaves.com, which itself is a GCE instance.

At least historically, high-value has been algorithms and software. The hardware (at all levels) was a second class citizen. Maybe opinions have changed.

Sensor designs are a combination of electronics, mechanical components, analysis, and manufacturing information. The mechanical parts are stored in the ▓▓▓▓ service which Nick was helping look in to. The rest of it is a mess of Google Drive and ▓▓▓ (an internal file sharing tool).

The logs go back to late September or early October 2015. I haven't checked the specific date.

On Wed, Oct 5, 2016 at 5:18 PM, Thomas E. Gorman <​▓▓▓▓▓▓▓▓▓▓​> wrote:

How far back do these logs go? I'm trying to figure out whether this is truly out of character based on AL's work pattern, or whether we only have a short window of logs (and therefore no idea what his normal work pattern was).

If these schematics are considered low-value, then where is the high-value stuff stored? Sensor designs, etc.

Subject: Re: connecting w/ outside counsel

It's all electronics designs - schematics and PCB layouts, and the component library for their creation. It was considered low-value enough that we had even considered hosting it off of Google infrastructure.

He was a high-level manager, and not doing any direct technical contribution at this level. It's not particularly surprising that he might check things out once in the misguided dream of maybe making individual contribution or maybe taking a look at the progress of a widget. It clearly wasn't part of his routine. Doesn't ring the alarm bells for me.

He only accessed SVN the one time, on 12/11/2015? That's a little strange, isn't it?

I'm still trying to parse his machine/host history, but I believe he had a windows laptop for only 3 weeks in December 2015.

What, exactly, is in this SVN system? PCB designs? Something else? Any other hardware designs?

The hostname isn't logged because it isn't part of the protocol. It was a Windows machine, but that's no surprise. Only one
   IP was ever used █████████, which is registered to Google.

Apologies for not getting back to you sooner.

Don't wipe anything just yet, and in fact, please send me the logs for anthonyl and gaetan.

Thanks,

-nick, as he has moved on to another autonomy company.

Was there any other information you were looking for? If not, I'm going to wipe my copies of the logs and the analysis scripts.

On Wed, Sep 21, 2016 at 11:21 AM, Sasha Zbrozek <████████████████> wrote:

Summary:

anthonyl - last access 2015-12-11

cdelaunay - no access ever

dburnette - no access ever

dgruver - no access ever

gaetan - last access 2016-02-22

lior - no access ever

rradu - no access ever

skshirsagar - no access ever

If you think there's need, I can send you those users' log entries, but they don't look very interesting.

-Sasha

+ Charley, who I just chatted with briefly.

Charley -- Tom Gorman is from Keker & Van Nest, our outside counsel on this matter, and Tammy is from the Google litigation team. @Tom G. -- Can you let Charley know what you need on your end?

Thanks all,

Tom

Hi Tom,

I haven't been able to find a way to get access logs. ████ is similar to SVN in that it syncs files locally for work, so even if someone sync'd the entire folder that wouldn't be out of normal operation.

There isn't an encryption or time out on the files either. csaint@ is a better contact to see if there is a log or report that might show sync operations around a specific date.

Nick

ATTORNEY-CLIENT PRIVILEGED & CONFIDENTIAL

Nick / Sasha—

Thanks in advance for your help! We're looking to check two systems for the account activity associated with a few Xooglers.

The systems are:

1. Solidworks/PLM

2. SVN/Altium

The individuals / time periods that we are focused on are:

anthonyl – Aug. 2015 through Jan. 2016

lior – Aug. 2015 through Jan. 2016 [he probably didn't have access to either system]

cdelaunay – Aug. 2015 through Jan. 2016 [also probably didn't have access]

dburnette – Dec 2015 to Feb. 10, 2016

gaetan – Jan 2016 through April 5, 2016

dgruver – Dec 2015 to Jan. 25, 2016

skshirsagar – June to July 2016

rradu – June to July 2016.

The second tranche includes hardware engineers and a supply-chain manager, so those logs could be more burdensome to collect. We might need to chat about ways to limit the burden by focusing the search (limit the time period? limit to certain types of access?).

Please let me know if you have any questions. Thanks again,

Hi Nick and Sasha,

Per my chat with you both individually, I'm connecting you with Tom Gorman from Keker & Van Nest (outside counsel), as well as Tammy who is lead POC from the Google litigation team.

@Tom -- please advise Nick and Sasha on what you need from your end.

Thanks all,

Tom
